SUPER FOOD

for dogs

-  GASTROINTESTINAL PROBLEMS
-  RENAL
-  LOW IN PURINE
-  WEIGHT CONTROL

RECOMMENDED BY VETS!

BECAUSE WE CARE
FOR THE WELL-BEING OF YOUR DOG

*„Quality since 1993 – more than
30 years of experience in developing
super premium pet food.“*

The health and well-being of your pet are our highest priorities. Therefore, we carefully selected specific ingredients while developing **MAC's Vetcare** to adjust it to your pets' special needs.

We designed four different supplementary and complete dietary foods that match different health requirements. For this reason, they are gently cooked to preserve vitamins

With **MAC's**, your pet receives everything it needs to live a happy and healthy life.

All varieties are:

- WITHOUT** gluten
- WITHOUT** sugar
- WITHOUT** preservatives
- WITHOUT** colourants
- WITHOUT** flavourings
- WITHOUT** animal testing
- WITHOUT** animal and bone meal

IMPORTANT NOTE:

Please take into consideration that **MAC's Vetcare** can only be used as support and does not replace veterinary treatment. It is recommended to seek the advice of a veterinarian before starting or extending the feeding period.

FRESH CHICKEN & INSECT

Complete food with lower purine content for dogs struggling with high purine values or diseases such as leishmaniasis.

Composition:

53.2% chicken (consisting of fresh chicken meat, chicken broth), 10% insects (consisting of insect larvae (Black Soldier Fly)), 10% sweet potatoes, 10% pumpkin, 10% potatoes, 5% rice flour, 0.7% whole egg powder, 0.5% minerals, 0.4% sunflower oil (refined), 0.2% nettle

ANALYSIS	
Crude protein	6,0 %
Crude fat	4,5 %
Crude ash	1,8 %
Crude fibre	0,5 %
Moisture	80,0 %

FEEDING RECOMMENDATION	
Recommended for:	diseases such as rheumatism, gout, leishmaniasis, heart and metabolic problems
Not suitable for:	pregnant and lactating dogs and puppies

It is recommended to seek the advice of a veterinarian before starting or extending the feeding period. All given information are guidelines.

IMPORTANT CHARACTERISTICS:

- Lean, fresh chicken meat
- Larvae of black soldier flies with low purine and protein content
- Without fillers and additives

Purines are components of proteins that are metabolized to uric acid. If excreted purine is not processed or excreted properly, high purine levels may accumulate in the blood. This can lead to urinary stones, gout, rheumatism and heart or metabolic problems.

Leishmaniasis is caused by parasites of the genus leishmania, which are transmitted by the bite of infected sandflies. They attack the cells of the immune system and can cause serious health problems. Since the parasites feed on purines, a infected dog should be provided with low purine food.

MAC's low purine **can support digestion and muscle development while having a low purine content.** The lean and fresh chicken as well as the larvae of black soldier flies have **a low purin and protein content.** In addition, excessive fillers and additives are excluded in order to keep the purine content low and provide a high-quality food.

FRESH CHICKEN

Complete food with low calories and cellulose to support digestion.

Composition:

78.2% chicken (consisting of fresh chicken meat, chicken hearts, chicken stomachs, chicken liver, chicken broth), 8% pumpkin, 7% carrot, 4% rice flour, 1.5% cellulose, 0.8% minerals, 0.5% whole egg powder

ANALYSIS

Crude protein	8,0 %
Crude fat	2,9 %
Crude ash	1,9 %
Crude fibre	1,1 %
Moisture	81,8 %

FEEDING RECOMMENDATION

Recommended for: adult and overweight dogs

Not suitable for: pregnant and lactating dogs and puppies

To achieve efficient weight loss or maintaining an ideal weight, the recommended daily energy intake should not be exceeded.

IMPORTANT CHARACTERISTICS:

- Low calorie dietary food with consistent nutrient quality
- With cellulose for a long-lasting sense of satiety
- Moderate fat content

Similar to humans, there are many different reasons why dogs can develop overweight. Obesity can have serious consequences regarding the health and quality of life of our dogs.

MAC's Weight Control **can support the weight loss journey of your dog**. The included cellulose can help to regulate the digestion and ensures a long-lasting sense of satiety.

This variety is low in calories while providing a consistent nutrient quality. Further, it helps to **regulate the calorie** intake with the aid of our detailed feeding recommendation. Fresh chicken and whole egg powder help to maintain muscles. Moreover, special vitamins and minerals support your dog's health. A moderate fat content satisfies your dog's energy demand on a long-term basis.

It is recommended to seek the advice of a veterinarian before starting or extending the feeding period. All given information are guidelines.

MORO'S CARROT SOUP

Supplementary food to support urgent gastrointestinal problems. Promotes digestion and regulates bowel movements with fresh carrots, psyllium and sea salt.

Composition:

50.3% carrots, 49% water, 0.4% psyllium, 0.3% sea salt

ANALYSIS

Crude protein	0,4 %
Crude fat	0,1 %
Crude ash	0,5 %
Crude fibre	0,4 %
Moisture	93,4 %

FEEDING RECOMMENDATION

Recommended for:	dogs of all ages
Not suitable for:	dogs with a suspected or an existing carrot allergy

IMPORTANT CHARACTERISTICS:

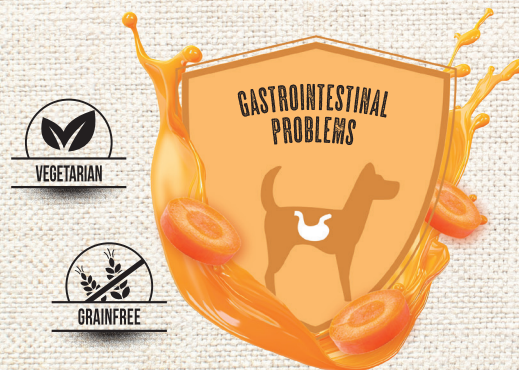

- Effective and fast aid for urgent gastrointestinal problems
- Refined composition with psyllium
- Prevents diarrhea effectively

There are many different sources that can cause urgent gastrointestinal problems: From intolerances to infections, there are many causes for diarrhea and stomach pain.

Moro's carrot soup was developed by Professor Ernst Moro and is **one of the most effective original recipes for treating acute diarrhea**.

It exclusively consists of carrots, water and salt and is cooked for a very long time. In addition, **there aren't any side effects** and it usually eases quickly and reliably.

We **enhanced the original recipe with psyllium** to further support the prevention of diarrhea since psyllium are rich in soluble fibre and can therefore help to regulate digestion and promote intestinal health. Moreover, they can help to regulate bowel movements and alleviate constipation, as the shells absorb fluid and thicken the defecation due to their gel-like consistency.

FRESH CHICKEN & BEEF

Complete food with lower protein and phosphorous content for dogs with kidney problems.

COMING
SOON

IMPORTANT CHARACTERISTICS:

- Special renal diet with lower protein and phosphorous content
- Includes omega 3 to diminish inflammation
- Lower sodium content to reduce fluid accumulation

During an acute renal insufficiency, the kidneys suddenly lose their ability to filter waste products from the blood and fail to regulate the body's water supply.

MAC's Vetcare Renal consists of fresh chicken and beef. Since too much protein can afflict the kidneys, this variety has a **lower protein and phosphorous content**. A regulated phosphorus content is important as diseased kidneys lose their ability to excrete phosphate.

In addition, omega 3 steeming from salmon oil and microalga can **help to reduce inflammation**. A lower sodium content also promotes the reduction of fluid accumulation. Antioxidants tend to protect cells from free radicals.
